

CASE STUDY

SharePoint Portal for Lawyers

Customer

An international white-label cloud service provider, conquering the fastest growing area in cloud computing. The company helps its resellers to perform better by increasing profit margins on their existing service offerings and by adding significant value to their service catalogs.

Challenge

The Customer turned to ScienceSoft to develop a SharePoint service portal that would allow clients (lawyers) to store their case studies, contracts, notes and other information. The solution should allow the Customer to create numerous versions of the portal to provide every client with his own storage.

Solution

ScienceSoft specialists developed a solution that allowed the Customer to create sub portals for each client. Each sub portal has its own structure and allows a user to store various documents. Each client has access only to his own portal, which rules out the possibility of information leakage.

Results

ScienceSoft team managed to create a complete solution that allowed the Customer to provide lawyers with a handy storage tool for their documents. The solution became popular with target audience and widen the Customer's service offering.

Technologies and Tools

Microsoft SharePoint Foundation 2010, jQuery, WF
