

## CASE STUDY

# SharePoint portal support

## Customer

Siberian Service Company is one of the leaders of the Russian oil field service market

## Challenge

The Customer had a vast area of operation and a large amount of branches in different regions of the country. Therefore, it met a necessity to create a unified management system and provide one-source support for all the users.

## Solution

ScienceSoft's team created the SharePoint portal, accessible within all domains of the corporate intranet and integrated with accounting and HR systems.

After a successful implementation of all portal components, it was passed to ScienceSoft's support team that handled all the Customer's change requests and new requirements for further development of the corporate system.

## Results

The Customer got a collaboration point that has increased the efficiency of information management processes and, therefore, increased the productivity of the core business.

## Technologies and Tools

Microsoft Office SharePoint Server, Visual Studio, WSP Builder, VSTO, SharePoint
